charging with ease

FASTER, MORE EFFICIENT CHARGING

GaN 25W Fast charge technology

– BS8546 compliant

Benefits of GaN Technology in USB Charging Devices

One of the primary advantages of using GaN technology in charging devices is its ability to provide a higher power output in a compact form. GaN USB chargers can deliver more power without the need for larger components, making them smaller and more portable. GaN-based devices have lower resistance and can convert energy more effectively, resulting in less energy loss during the charging process.

For technical information visit www.oldeani.com/gan25w

Ideal for charging mobiles on the go

GaN 45W Fast charge technology

– BS8546 compliant

For technical information visit www.oldeani.com/gan45w

Perfect for phones and tablets

GaN 70W Fast charge technology

– BS8546 compliant

A good travel adapter should do two things: charge your device and charge it quickly. Gallium Nitride (GaN) technology packs all the required electronics into a tiny package without overheating. 70W will charge a mid-size laptop.

For technical information visit
www.oldeani.com/gan70w

GRS4.0 Global Recycled Standard

Recycled materials account for 20% of the total weight of the product. GaN technology improves efficiency and reduces carbon emissions.

Benefits of GaN in a nutshell

- Faster, more efficient charging
- Safer charging with reduced heat loss, resulting in less risk of overheating
- Uses less electricity
- Smaller and lighter chargers
- Ideal for multi-charging without reduced power

Travel adapters with
fast charge technology

Venture USB C travel adapter

– BS8546 compliant

High quality, travel adapter with USB C and fast charge ports.

The Venture meets the very latest British Standards BS8546, and features built in safety features including lockable shutters, insulated pins and built in current protector.
